Microtones (for Strings, Flute, Clarinet, and Voice)

Microtones do not have to be an exact quartertone, they can be very loosely estimated. You do not need to match microtones with the other players

Voice:

Sing without vibrato as much as possible/comfortable.

The vowels in the piece are from IPA. Below is a chart of the vowel sounds used in the piece, in order of their appearance. **Note: vowel sounds are a guideline, feel free to pick and choose if they are uncomfortable, following the basic pattern of changes.**

ʌ – “cut”
ɑ – “hard”
ɛ – “head”
ə – first syllable in “about”
ɒ – “dog”
ʊ – “look”
u – “use”
a – “car”
i – “we”

Flute and Clarinet:

For the flute and clarinet microtones, you can choose to use alternate fingerings, or bend the pitch, depending on your preference.

Piano:

Harmonics:

Piano harmonics are notated with the note to be held down, and the sounding pitch in parentheses, like so:

Only two harmonics are used in the piece. The nodes for both should be fairly close to the fingerboard. I suggest putting masking tape on the string at the node.

Resonance:

Hold down the piano note for as long as written. Ties to nothing indicate that piano should be left to fade out, possibly with pedal, which you should use at your discretion.

Vibraphone:

You will need a bow, and some medium-hard mallets.

Resonance:

Generally all notes should be left to ring. Use pedal at your discretion, taking into account the lengths of notes and ties.

Strings:

Vibrato:

Play without vibrato.

Harmonics:

Natural harmonics are written with only the sounding pitch.

Bow Changes:

You can change the bow if necessary during a long tied note, but make the change as smooth as possible.

[C] escalating, searching

This section is meterless. Players should each play their pitch roughly every 3 seconds. Avoid counting perfectly. Entrances should be staggered though its fine if some pitches are played at the same time. Players can move around their pitch microtonally if possible. Lasts for about 20 seconds overall

Entrances do not need to be in a specific order, they are laid out like this to indicate that players should come in at different times.

After about 10 seconds, begin to speed up with shorter pauses between pitches
